Case Narrative
SDG: W04380

This report contains the analytical results for the four samples received under chain of custody by STL St. Louis between November 10, 2004 and November 19, 2004. These samples are associated with your F03-025 SAF. The SDG was closed on 11/24/04.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted below.

The test results in this report meet all NELAP requirements for parameters in which accreditations are held by STL St. Louis. Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium, unless requested wet weight by the client.

Observations/Nonconformances

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Samples were received at the laboratory after the holding time had expired for several of the requested tests.

The package is being re-submitted to incorporate changes requested by the client to target lists and flagging.

Volatiles

The LCS recoveries for batch 4317380 are outside QC limits for less than 10% of the compounds spiked. Laboratory QC practices, based on federal guidance documents, allow for up to 10% of the spike compounds to be outside QC criteria without necessitating re-preparation/re-analysis. Sample purge efficiency and compliance is demonstrated by the remaining acceptable LCS recoveries.

The MS/MSD recoveries are outside QC limits for less than 10% of the compounds spiked. Laboratory QC practices, based on federal guidance documents, allow for up to 10% of the spike compounds to be outside QC criteria without necessitating re-preparation/re-analysis. Sample purge efficiency and compliance is demonstrated by the remaining acceptable MS/MSD recoveries.

Case Narrative
SDG: W04380

Anions

The MS recovery for Nitrite was outside the QC limits. The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recovery is attributed to matrix interference.

Nitrate

The MS recovery for Nitrate is outside the established QC limits. A matrix interference is physically evident in the sample. Method performance is demonstrated by acceptable LCS and LCS-Duplicate recoveries. No further action is required.

PCB

Due to its extremely high radiation readings, sample B19189 was analyzed at an initial ten fold dilution. The reporting limit has been adjusted for the dilution. Surrogates were diluted out.

The MS/MSD sample required at least a twenty fold dilution, making recoveries for the MS/MSD unreliable. There was no reportable data for the MS/MSD. LCS recoveries were acceptable.

Continuing Calibration Checks 200, 208 and 216 all failed low for Aroclor 1016 and 1260 on the confirmation channel (A). All recoveries were acceptable on Channel B, which is where these samples were reported from.

Mercury

Analysis of the sample designated for MS/MSD resulted in a sufficiently high concentration such that the MS/MSD are above the instrument's calibration range. MS/MSD results should be considered estimated values.

Semi-Volatiles

Due to sample matrix, limited volume and RAD levels, an MS/MSD was not run for method 8270 on a sample from this SDG.

There was insufficient volume of sample B19188 provided to perform the analysis at the method specified amount due to laboratory request to limit volume due to high RAD levels. A reduced sample amount was prepared. The reporting limit has been elevated accordingly.

Case Narrative
SDG: W04380

Metals

The MS/MSD recoveries for sample B19189 for Antimony, Chromium and Nickel are outside the established QC limits. The RPD is within method acceptance criteria indicating possible matrix interference. Method performance is demonstrated by acceptable LCS recovery. No further action is required.

The MS/MSD recovery in sample B191F1 for Chromium, Copper and Lead is outside the established QC limits. The concentration of these metals in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. The MS/MSD recovery for Antimony, Nickel and Silver is outside the established QC limits. The RPD is within method acceptance criteria indicating possible matrix interference. Method performance is demonstrated by acceptable LCS recovery. No further action is required.

STL ST. LOUIS

SAMPLE SUMMARY

W04380 : F4KL00333

NO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
GWNAE	001	B193K1	10/26/04	09:41
GWNPG	002	B19189	10/26/04	09:41

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Sulfate	ND	5.0 mg/kg	MB Lot-Sample #: F4K170000-165 MCAWW 300.0A	Dilution Factor: 1	11/16/04	4322165
Total Cyanide	ND	0.50 mg/kg	MB Lot-Sample #: F4K220000-472 SW846 9010A	Dilution Factor: 1	11/22/04	4327472
Total Sulfide	ND	10.0 mg/kg	MB Lot-Sample #: F4K290000-155 SW846 9030	Dilution Factor: 1	11/24/04	4334155

NOTE(S) :

Calculations are performed before rounding to avoid round-off errors in calculated results.

B Estimated result. Result is less than RL.
